\footnotetext{
1．Crown copyright material is reproduced with the permission of the Controller of HMSO and the Queen＇s Printer for Scotland．
2．The graph displays the measure（as defined）for each indicator expressed as a percentage difference from the national or regional reference value（the zero point on the scale）．Indicators with blue bars are described as＇above＇or＇below＇the reference value．Indicators with red／yellow／green bars are described as＇better＇or＇worse＇than the reference value．In both cases，the graph cuts off at
$100 \%$ or $+100 \%$ even where values are beyond these limits．The reference value is shown to the left of the graph and the plus／minus percentage value is shown to the right．
This figure is calculated as the ward measure minus the reference measure divided by the reference measure and multiplied by 100 ．
The＇total population＇and＇number of households＇use the actual number rather than any derived measure．
3．Social Grade AB：higher \＆intermediate managerial／administrative／professional occupations；Social Grade E：on state benefit，unemployed，lowest grade workers 4．IMD（Index of Multiple Deprivation）shows the national quintile（Q1 is the most deprived）for England for the overall index and selected domains

| 㐅 | or R：More than $33 \%$ worse than average or Y：Within $33 \%$ of average or G：More than $33 \%$ better than average | The red／yellow／green bars show the indicator＇s relationship with the average and where no value judgement is appropriate coloured dark blue．Note that for some indicators＇worse＇is higher than average and for others＇worse＇is lower than average．The guide to the right is to assist those with colour vision difficulties．The pie chart next to the ward name illustrates the proportion of indicators of each colour． |
| :---: | :---: | :---: |
|  | cr－crude rate per 1000 population；sr－age \＆sex－standardised rate per 100，000 population；rk－estimated rank of 7932 wards in England（1 is most deprived）；p／Ha－people per hectare；yrs－years |  |
|  | n／a：not available－data may not be available for a number of reasons e．g．lack of complete national coverage，small population．In addition，where the number of cases for a particular indicator is＇$<5$＇， measures are marked $\mathrm{n} / \mathrm{a}$ for reasons of confidentiality |  |
|  | ！This indicates a warning that although the measure is shown，it is based on less than 20 events and should therefore be interpreted with caution． |  |
|  | X This indicates that the number is between 1 | e），but the value is supressed to maintain confidentiality |

\footnotetext{

1. Crown copyright material is reproduced with the permission of the Controller of HMSO and the Queen's Printer for Scotland.
2. The graph displays the measure (as defined) for each indicator expressed as a percentage difference from the national or regional reference value (the zero point on the scale). Indicators with blue bars are described as 'above' or 'below' the reference value. Indicators with red/yellow/green bars are described as 'better' or 'worse' than the reference value. In both cases, the graph cuts off at $100 \%$ or $+100 \%$ even where values are beyond these limits. The reference value is shown to the left of the graph and the plus/minus percentage value is shown to the right
This figure is calculated as the ward measure minus the reference measure divided by the reference measure and multiplied by 100 .
The 'total population' and 'number of households' use the actual number rather than any derived measure.
3. Social Grade AB: higher \& intermediate managerial/administrative/professional occupations; Social Grade E: on state benefit, unemployed, lowest grade workers 4. IMD (Index of Multiple Deprivation) shows the national quintile (Q1 is the most deprived) for England for the overall index and selected domains

|  | or R: More than $33 \%$ worse than average or Y: Within 33\% of average or G: More than $33 \%$ better than average | The red/yellow/green bars show the indicator's relationship with the average and where no value judgement is appropriate coloured dark blue. Note that for some indicators 'worse' is higher than average and for others 'worse' is lower than average. The guide to the right is to assist those with colour vision difficulties. The pie chart next to the ward name illustrates the proportion of indicators of each colour. |
| :---: | :---: | :---: |
| শ্শ | cr - crude rate per 1000 population; sr - age \& sex-standardised rate per 100,000 population; rk - estimated rank of 7932 wards in England (1 is most deprived); p/Ha - people per hectare; yrs - years |  |
|  | $\mathrm{n} / \mathrm{a}$ : not available - data may not be available for a number of reasons e.g. lack of complete national coverage, small population. In addition, where the number of cases for a particular indicator is ' $<5$ ', measures are marked $\mathrm{n} / \mathrm{a}$ for reasons of confidentiality |  |
|  | ! This indicates a warning that although the measure is shown, it is based on less than 20 events and should therefore be interpreted with caution. |  |
|  | X This indicates that the number is between 1 and 4 (inclusive), but the value is supressed to maintain confidentiality |  |

    | or Y: Within $33 \%$ of average |
    | or G: More than $33 \%$ better than average |$\quad$| The red/yellow/green bars show the indicator's relationship with the average and where no value judgement is appropriate coloured dark |
    | :--- |
    | blue. Note that for some indicators 'worse' is higher than average and for others 'worse' is lower than average. The guide to the right is to |
    | assist those with colour vision difficulties. The pie chart next to the ward name illustrates the proportion of indicators of each colour. |

[^11]:    1. Crown copyright material is reproduced with the permission of the Controller of HMSO and the Queen's Printer for Scotland.
    2. The graph displays the measure (as defined) for each indicator expressed as a percentage difference from the national or regional reference value (the zero point on the scale). Indicators with blue bars are described as 'above' or 'below' the reference value. Indicators with red/yellow/green bars are described as 'better' or 'worse' than the reference value. In both cases, the graph cuts off at $100 \%$ or $+100 \%$ even where values are beyond these limits. The reference value is shown to the left of the graph and the plus/minus percentage value is shown to the right
    This figure is calculated as the ward measure minus the reference measure divided by the reference measure and multiplied by 100 .
    The 'total population' and 'number of households' use the actual number rather than any derived measure.
    3. Social Grade AB: higher \& intermediate managerial/administrative/professional occupations; Social Grade E: on state benefit, unemployed, lowest grade workers 4. IMD (Index of Multiple Deprivation) shows the national quintile (Q1 is the most deprived) for England for the overall index and selected domains

    |  | or R: More than $33 \%$ worse than average |
